Welcome to Voltage SecureMail

Voltage SecureMail is an easy to use service that allows secure transmission of confidential information via encrypted email. The service enables organizations to comply with regulations and enforce best-practice protection of message confidentiality.

Using Voltage SecureMail

Using Voltage SecureMail – Recipient

FNF customers, those with email outside of the FNF messaging network, can easily receive and open secure emails. First time recipients need to create a SecureMail ID by following the steps below.

1. Open the email from your inbox. Follow the instructions to view your secure message and, “Open the attachment to this email”.

To view your secure message:
1. Open the attachment to this email
2. Follow the instructions
2. When the attachment opens, follow the instructions and, “click Read Message below.”

3. Next, create your SecureMail ID by completing your name, password, and recovery question and answer. Click Continue.
4. A new message will instruct you to “Check Your Email.” Go back to your inbox, “Open the email,” and “Click the link.” The link will open the secure message.
